

ALESSANDRO BONATTI

FULL STACK DEVELOPER

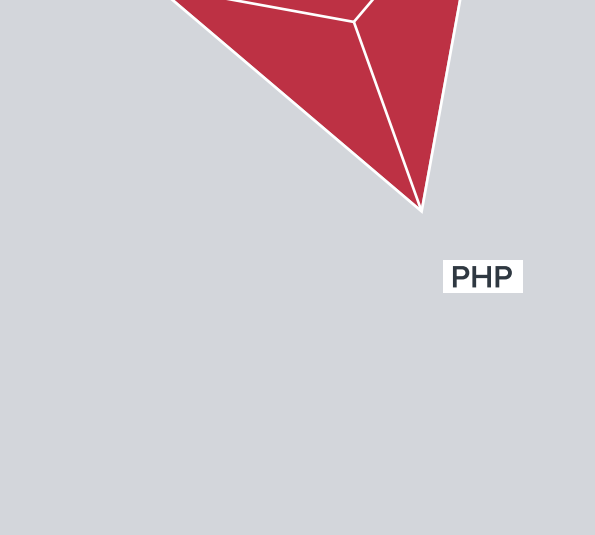

Hej, I'm Alessandro,
a Full Stack Web Developer with over 25 years of experience in the field.

I started my career in 1999 as an employee, a role I held for 13 years, before transitioning to freelancing and founding my own agency, which I successfully managed for another 13 years.

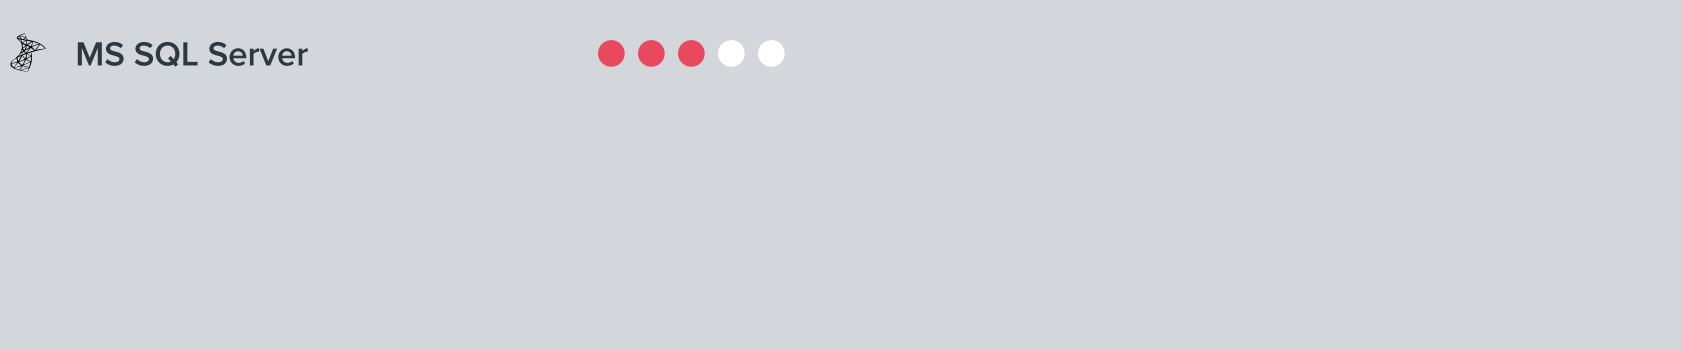

Through this journey, I have gained extensive experience in web development, working with various technologies and tackling projects of varying complexity. My expertise ranges from front end to back end development, with a strong focus on creating scalable and high-performance solutions. Now, with great enthusiasm, I wish to fulfill my dream of relocating to Scandinavia and bringing my skills and passion for web development to this region. I am drawn to the technological innovation and work culture of Northern Europe, and I am confident that my background can positively contribute to your team.

I would be delighted to further discuss my application in an interview and explore how my skills can be valuable to your company.

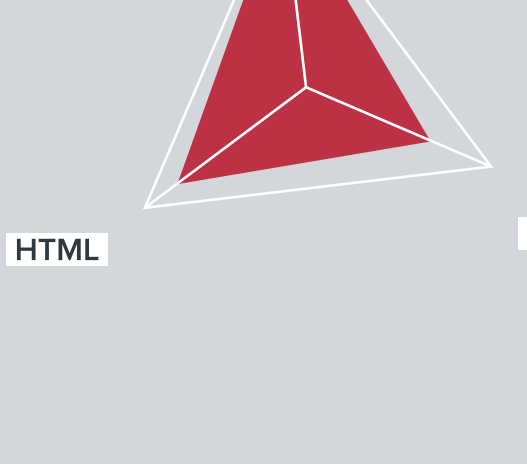

Web Backend — API

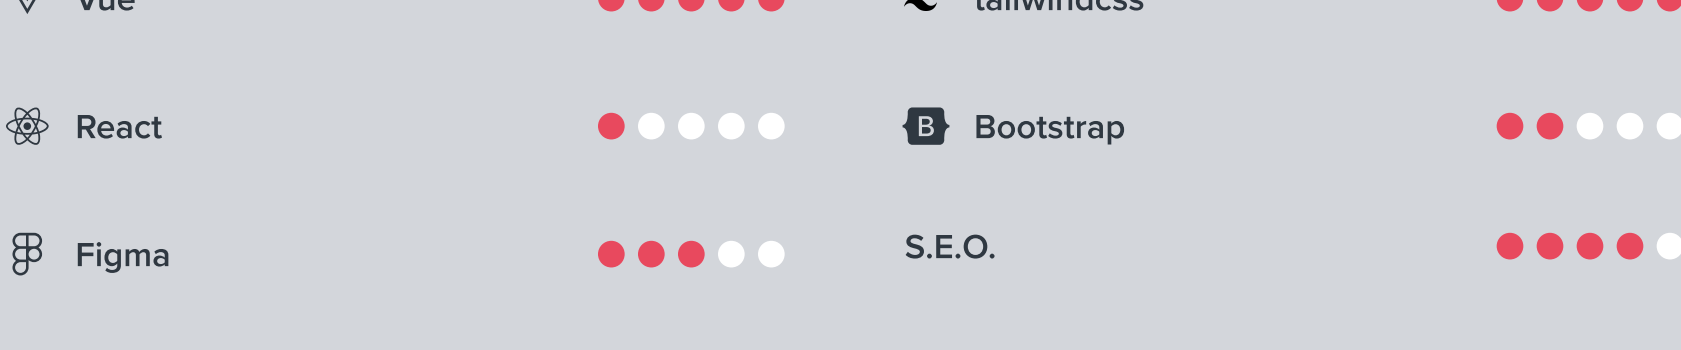

I started my professional career as a .Net developer in a Microsoft environment, then, within a few years, I transitioned to the open source world (and philosophy). I became passionate about development frameworks and, in particular, I fell in love with **Laravel framework** and its ecosystem, which I've been using since version 3, and still remains my primary development tool today.

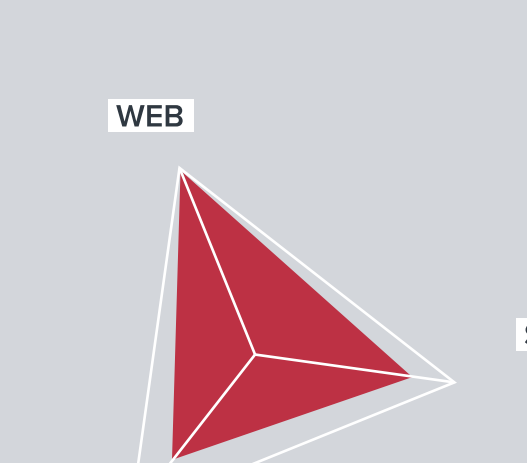

Web Frontend

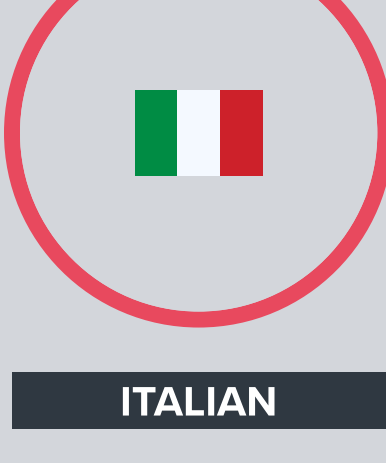

In recent years, I have sought to bridge the gaps that separated me from becoming a complete and independent developer as much as possible by deepening my knowledge of Front end development and JavaScript, particularly the **Vuejs framework alongside Tailwind CSS**. I have experience with SEO-related issues, as well as usability and accessibility.

Teamwork — Tools

I can configure a scalable Linux web server based on PHP and MySQL, including a backup system. I have developed and used various types of APIs, I can work independently, but I am also accustomed to working in teams of various sizes. I have built my own CMS from scratch, which I use as the foundation for most of my projects.

- e-Project Srl** 2023 — Today
Full stack developer | Parma, Italy
Tired of the tough Italian freelancer life, I decided to go back to **full-time programming**. The new possibilities brought by AI have become my main interest.
- Methlab** 2011 — 2023
Co-owner and co-founder | Fidenza, Italy
I co-founded and managed **my own web development agency**, overseeing the design, development, and management of websites and applications. I specialized as a Full Stack Developer, handling both frontend and backend development.
- e-Project Srl** 2001 — 2011
Full stack developer | Parma, Italy
I started by developing simple websites and gradually transitioned to more complex projects, including management systems and e-commerce platforms. I focused on creating intuitive user interfaces and **advanced functionalities**, working on projects across various industries while continuously improving my technical skills.
- FirstPoint** 1999 — 2001
Web developer | Fidenza, Italy
My first job in web development, where I created and maintained websites with a focus on HTML, CSS, and JavaScript. I collaborated with designers and other developers to deliver **effective and functional solutions**, adapting to client needs.

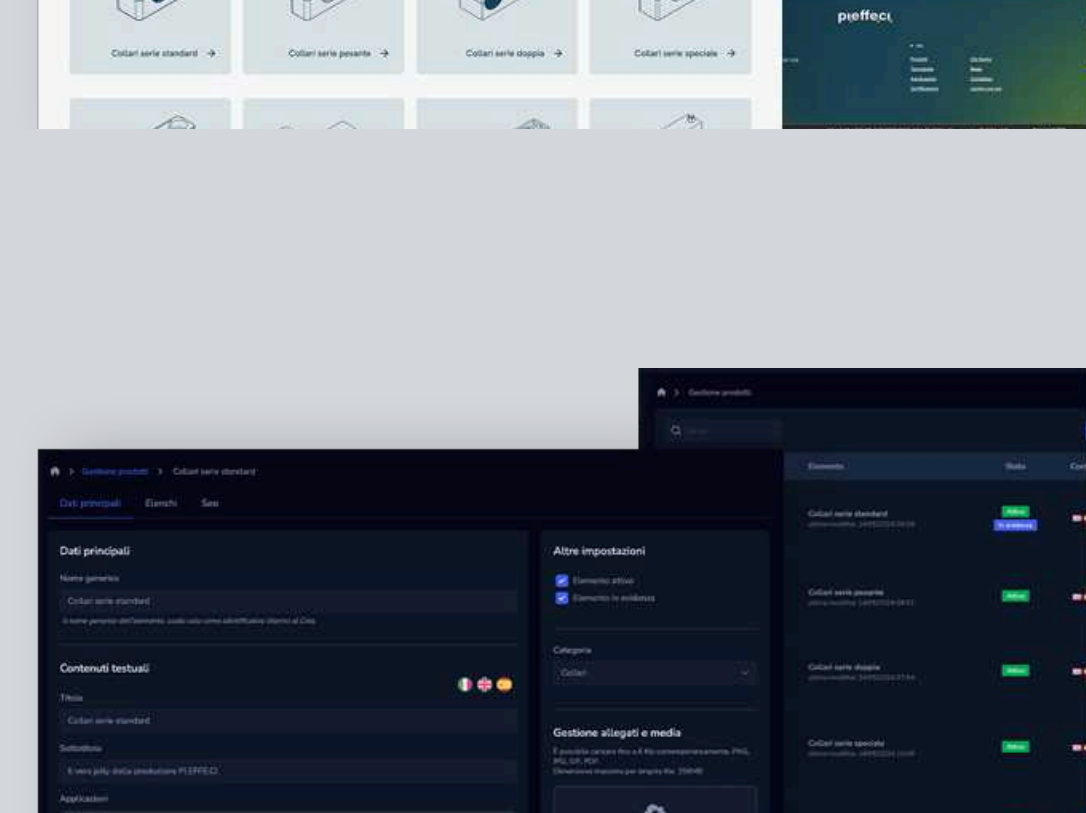

I have developed dozens of projects, ranging from **websites to business management systems**, APIs, and payment systems. Each project has been an opportunity to tackle new challenges and refine my skills. Most of these projects are protected by authentication, but I would be happy to **showcase them in a dedicated meeting**, presenting the **solutions implemented**, my **development approach**, and the **technologies used** to achieve the required goals.

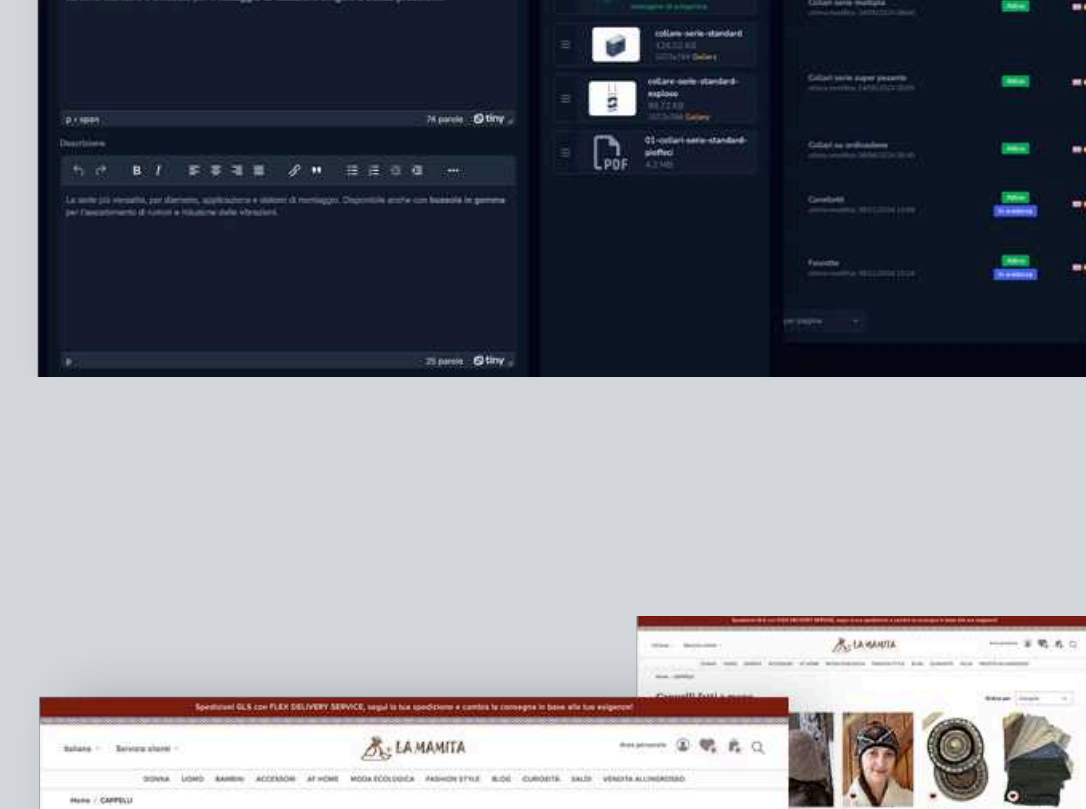

AS METHALAB DEVELOPER
PROJECT
parmafluid.com
Company website. Custom catalogue structure, data import from old MySQL db, news history, ad hoc CMS, 5 different languages contents management, third party newsletter integration.
MY ROLE
Backend Development — Server and deploy management

Company B2C management system. Api connection to company websites. Orders and customers management. Under authentication, I will be happy to show you all its features.
MY ROLE
Full Stack Development — Server and deploy management
BEHIND THE SCENE
Tailwind CSS, VueJs, Laravel, MySQL, Api data management

- 1996 — 1999** University studies in Communication Sciences — University of Parma
Not completed — University of Parma | Parma, Italy
My passion for this incredible new invention called "the Internet" led me to **explore web development on my own**. Fascinated by its potential, I started learning independently, laying the groundwork for my future career in the field.
- 1991 — 1996** Technical High School specializing in Computer Science
Grade 51/60 Diploma — I.T.I.S. Berenini | Fidenza, Italy
During this period, I learned the fundamentals of programming in an era when the internet was not yet widespread. This experience gave me a **strong foundation in problem-solving** and algorithmic thinking, which I later applied to web development.

Self-taught Web Development: in the early 2000s, web development was not yet part of school curricula. For this reason, I embarked on a self-learning journey, independently studying technologies and programming languages to keep up with industry advancements.

- The mountains and forests are my refuge, places where I can find **balance between nature and freedom**. I love exploring the mountains in every possible way, from trekking to mountain biking, from skiing to climbing. I adore snow, fog, and cold climates; and I already know that the thing I will miss the most when I'm in Sweden will be the Alps.
- I have also been passionate about video games and role-playing games, both digital and tabletop, since I was a child. I believe they help **stimulate creativity**, critical thinking, and teamwork. I enjoy TV series, cinema, and nerd culture in general.
- I'm a passionate traveler with a strong attraction to the Far East, especially Japan. I **love exploring** its ancient culture, from historic temples and zen gardens to futuristic metropolises. I'm fascinated by the wabi-sabi philosophy, traditional cuisine like ramen and sushi, and Japanese pop culture, from manga to video games. Traveling, for me, is a way to discover the world, enrich myself, and live unforgettable experiences.

Born on **17/01/1976**, I am an independent person with years of experience and a strong determination to constantly challenge myself. I approach every new challenge with enthusiasm and a desire to grow, always open to new learning and improvement opportunities.

I have a **driving license for both cars and motorcycles** and am used to managing myself autonomously and adapting to different environments. I look forward to relocating to Scandinavia to embark on new professional and personal experiences, bringing with me my **initiative, reliability, and eagerness** to actively contribute to new projects.
